

# Working with ORM Properties

15 December 2021 21:50

=> When we are working with Data JPA we can use few ORM properties

**show\_sql = true** ==> To print generated SQL queries on console

**format\_sql = true** ==> To print SQL query with Pretty Printing

**ddl\_auto = create/update/create-drop/validate** => For Schema Generation

**Dialect** ==> To configure dialect class name

spring.jpa.hibernate.ddl-auto=create => Always table will be created

spring.jpa.hibernate.ddl-auto=create-drop => At the end table will be dropped

spring.jpa.hibernate.ddl-auto=update => it will create tbl if it is not available

spring.jpa.hibernate.ddl-auto=validate=> compares entity cls with table structure
